Emerson ([Emerson.com](https://www.emerson.com)) has partnered with SirajPower to implement a solar rooftop plant at its Middle East and Africa Head Office in Dubai, making it the largest solar rooftop plant in a single location within Jebel Ali. This significant sustainability project supports Emerson's long-term commitment and environmental, social, and governance (ESG) goals to promote decarbonization efforts, minimize emissions and enhance resource efficiency. Along with SirajPower, Emerson also appointed Clenergize Solar Consultants as comprehensive advisors to cover the specifications, tendering, contract management, design reviews, and project management.

The official signing ceremony was held on July 26, at the Emerson's JAFZA facility and attended by Emerson's Middle East and Africa President Vidya Ramnath and SirajPower's CEO Laurent Longuet, marking the launch of the solar rooftop project's installation and commissioning, which is expected to go live before year-end.

The solar rooftop, which will be financed, designed, constructed, and operated by SirajPower, consists of 5,489 solar panels covering a roof area of 19,340 sqm across four of Emerson's warehouses and office buildings in Jebel Ali South. The solar system has a capacity of 2.6 MWp and will produce 3.923 GWh of clean energy annually. This project will reduce Emerson's carbon emissions by 2,891 metric tons annually.

The development aligns with the Dubai Electricity and Water Authority's (DEWA) Shams Dubai program, a leading initiative to make Dubai the smartest city in the world by supporting the diversification of energy mix and promoting the use of clean and renewable energy sources.

"Emerson is transforming its culture, business practices, and infrastructure to support a more inclusive and sustainable planet," Ramnath said. "This solar panel installation project is a great example of our commitment toward sustainability in Dubai and is in line with our global sustainability framework, the 'Greening Of, Greening By, and Greening With Emerson' which addresses how we, as a company, approach sustainability through how we do business, how we support our customers and how we collaborate with stakeholders."

"We're thrilled to have such an enormous global company like Emerson join our journey to a greener economy. As climate change and global warming-related challenges are becoming increasingly important, more companies are beginning to prioritize sustainability as part of their goals towards a sustainable future. With clean energy at the very core of the UAE's sustainability vision for the next 50 years, we are honored to be able to support the country achieve its goals," said Laurent Longuet, CEO of SirajPower.

Emerson recognizes its significant role in advancing technologies and solutions that help improve environmental sustainability in their business, their customers, and the industries they operate in. With this project, Emerson is committed to the environment by lowering emissions, improving energy and resource efficiency, and decreasing waste across the company. Additional information about Emerson's ESG initiatives can be found in Emerson's ESG Report at ([Emerson.com/ESG](https://www.emerson.com/ESG)).
